Pros: Very smooth highs, punchy bass, neutral yet NEVER analytical, great detail retrieval , better than average sound stage, amazing black background

Cons: None

I just simply love this amp, it sounds better in every way than y little dot mkvi +.

This amplifier might not be the ultimate out in the market, but in my opinion it is good or excellent at everything that amp are supposed to do.

It has beautiful midrange , highs and bass . Soundstage is very 3 dimensional, separation of instruments is even more amazing. Detail is plentiful and it is very easy to hear.

This headphone will power any headphone, yes including the ridiculous HE6 with power left to use with their cans the same time. I know this is hard to believe but I have 0 reasons to lie.
